Algorithms module 4

Faye van ‘t slot 3627853 and Isabel Ngo 3457389

15/06/2026

Description:

We were inspired by Frutiger Aero, so we made a minimalistic aquarium for a zen vibe, sort of like the relaxing feeling of playing the offline no-wifi game. For our final assignment, Isabel and I created a peaceful but lively underwater world that you can actively explore. Before diving in, the experience begins with a playful start screen where you can choose to play as a squid, a turtle, a seal, or a seahorse. Once you enter the aquarium, you are greeted by a soothing environment featuring gently moving sand at the bottom and natural, swaying corals. You will also see a jellyfish slowly pulsing upwards, leaving a soft, glowing light trail behind it as it swims. As the player, you can freely navigate your chosen character all around the tank using the arrow keys. The tank is also filled with a large school of little fish swimming together in a group. The most fun interaction happens when you swim your character into the school; the fish will actually get startled and quickly scatter away from you, making the whole world feel truly alive and responsive.
